

## RDA AHVP30-6 NA Positioner

3,000 lb capacity

Red-D-Arc's RDA AHVP30-6 NA positioners provide 360° rotation of a work piece along with 135° forward tilt to better position weldments for better down-hand or automatic welding. All-fabricated steel frames and bases support rotation and tilt spur-gears driven by worm-gear reducers to provide enhanced safety and durability. Powered table tilt and rotation are controlled via push-button pendants for controlling constant-speed up and down tilt, variable-speed table rotation, and forward/stop/reverse table direction/emergency-stop controls, as well as tilt limit-switches (for both directions). Rotation motors are inverter-controlled variable-frequency AC-type, providing a full range of variable-speed control with excellent speed-regulation. Red-D-Arc welding positioners are engineered to provide maximum safety and dependability; control boxes have IP65-rated enclosures with full UL and CE certification and all of our positioners have been tested and certified by UL to establish safe working loads - a first in the weld automation industry.
