

Wet Abrasive Blaster

The most advanced, versatile, and user-friendly system on the market today

WHAT IS WET ABRASIVE BLASTING?

Wet abrasive blasting works by mixing water and abrasive first, then using compressed air to propel the slurry against the surface. Unlike dry blasting, wet abrasive blasting substantially reduces media consumption up to 75% and eliminates dust by over 90% while still providing any profile and surface cleanliness required.

SIMPLY THE BEST IN WET ABRASIVE BLASTING

With state of the art pneumatic controls, setup is simpler and faster than ever, even for the most novice users! We're talking start to blasting in 5 minutes or less! With blast pressures that range from 30 to 120psi, the CLEARblast 150 can tackle a large variety of jobs from soft fiberglass to tough coatings on steel. Its compact and mobile, yet, has a 1HR runtime! All that and more make the CLEARblast 150 simply the BEST!

5 Minute Setup | 1HR Runtime | Safe for the User

- Simple Pneumatic Controls
- Digital Hour Meter
- Online Training Videos
- Powder Coated Steel Frame
- Fork Pockets for Lifting

- Storage Lid & Water Hose
- On-Board Water Tank
- Run Flat Tires/Locking Casters
- Centralized Hose Connections

Less Containment | No Chemicals | No Electric

Specs

General	
Dimensions	48"L x 26"W x 48"H
Weight	350 lbs. Dry \ 673lbs. Wet
Air Capacity	100-400cfm (Hose & Nozzle Size Dependent on Air Supply)
Pot Media Capacity	100lbs (1+ hrs. Run Time)
Hose Length	50 Ft. Blast Hose Standard, Up to 200Ft. with Extension Hoses
**Specifications subject to change without notice.
