

MOBILE HYDROSTATIC TESTING SERVICES

Preserving Life One Person at a Time

Improved Efficiency, Inventory Control and Safety.

Airgas On-Site Safety Services is a leader in hydrostatic testing, with over 40 years of field experience. And now, we deliver that excellence right to your site through our new fleet of mobile service centers. Each “shop on wheels” allows Airgas On-Site Safety Services to perform required Department of Transportation (DOT) cylinder hydro testing as well as full-service breathing apparatus maintenance. You benefit from top-quality testing services without the downtime and transport risk of off-site testing.

Airgas On-Site Safety Services knows you lose time and money when you take equipment off site for required testing. Our mobile service centers drastically reduce your equipment out-of-service time and eliminate concerns associated with transporting cylinders.

The bottom line is improved efficiency, better inventory control and safer equipment ready to go back on-line. That’s what you get with Airgas On-Site Safety Services.

Mobile Testing On Site saves time, significantly reduces costs, and prevents cylinder damage.

For maximum on-site safety, it's critical to keep your cylinders, regulators and valves reconditioned and at the highest working standards at all times. Sending them off site for maintenance disrupts your operations and risks potential cylinder damage during transit. Airgas On-Site Safety Services certified on-site technicians are available to be at the work site for one day, one week, or whatever it takes, depending on the volume of cylinders and breathing apparatus to test. Capabilities include:

- Testing SCBA cylinders ranging in size from seven to 90 cubic feet (includes hydrostatic testing, regulator valve testing, visual inspection of each cylinder by two sources, and valve re-insertion so your cylinder is ready to be filled)
- Comprehensive respiratory air pack testing and reconditioning
- Complete daily and end-of-project status reports
- Replacement cylinders and loaner cylinders in emergency situations

Realize up to 50% Savings in Time and Shipping Charges Using our Mobile Facility...fast, reliable, on time and on budget.

Every one of our mobile service centers is a true maintenance and repair center on wheels. Our highly skilled technicians have extensive experience in the testing, repairing, and reconditioning of cylinders and breathing equipment to get your equipment back on-line fast. This translates into significant cost savings that go right to your bottom line.

Safety...and much more.

Airgas On-Site Safety services delivers the resources and expertise of Airgas added to the Oilind Safety heritage you trust.

With an expansive national footprint, an extensive product line, industrial construction specialist expertise, Red-D-Arc® welding equipment rental, complete industrial gas resources, and safety training programs, Airgas On-Site Safety Services provides the complete solution for all your on-site safety, MRO and gas supply needs.

Engineering the right solutions for all your safety and turnaround needs.
