Description

This recipe presents a typical Belgian Golden Strong Ale: pale colour, high alcohol level, strong effervescence due to the high carbonation level, dry finish, and a beautiful and complex fruity-ester aroma in perfect balance with a floral hop character.

*The bitterness depends on the alpha acid content of hops, boiling conditions and other parameters.

This recipe is provided by Castle Malting®. Please note that this recipe is just a guideline. Some modification might need to be done to meet different technologies, efficiencies and ingredients yield as grain dry extract and hop alpha acid percentage.
